

**Western Virginia EMS Council
Trauma PI Project
First Quarter, 2008**

**Data obtained from PPDR submissions to OEMS: July 1 - December 31, 2007
Criteria: Field Diagnosis of Traumatic Injury**

Scene Time defined as: Time arrived on scene to Time departing scene

Data submission excluded: >180 minutes on scene (belief that inaccurate submission of data had occurred)

Conclusion: 51% of all calls managed by ALS providers lead to an on-scene time of >10 minutes but <=20 minutes; while 42% of all calls managed by BLS providers lead to an on-scene time of >10 minutes but <=20 minutes.
